Parallel but complementary studies using animal models, and both in vivo imaging and post-mortem studies in humans, suggest that depression does not arise through pathology in a single brain region or cell type, but instead is mediated by altered functioning across an integrated cortico-limbic circuit in the forebrain (Harris and Gordon, 2015, Heshmati and Russo, 2015).

Functional traits offer a useful alternative approach, providing a means of distinguishing between niche and neutral assembly processes 12, 13, 14. Indeed, accumulating evidence suggests that competitive interactions and species filtering by disturbance are, at least partly, driven by species functional traits. Disturbance generally increases mortality rates and reduces reproduction rates for ...

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...
